FINAL PROJECT: WEBSITE DEVELOPMENT

Subject: Web Development
Project Title: Design and Development of an Interactive Website

I. Project Description

You are required to design and develop a fully functional, interactive, and responsive website based on a selected business, organization, institution, or service.

The project aims to apply the concepts and practical skills learned throughout the semester using HTML, CSS, and JavaScript.

The website must contain multiple interconnected pages, an organized layout, appropriate visual elements, user account interfaces, and working interactive features.

II. Suggested Website Themes

Students may select one of the following themes for their final project:

1. **E-Commerce Website** – An online shopping platform for clothing, gadgets, shoes, accessories, or other products.
2. **Restaurant and Food Ordering Website** – A website for a restaurant, café, milk tea shop, or food business that showcases its menu and allows customers to simulate food orders.
3. **Hotel and Travel Reservation Website** – A website for a hotel, resort, travel agency, or tourism business that showcases accommodations, destinations, and reservation services.
4. **School or University Website** – A website for an educational institution that presents its programs, admission requirements, school information, faculty, and other services.
5. **Clinic or Healthcare Website** – A website for a medical clinic, dental clinic, or healthcare facility that presents its services, staff, schedules, and appointment requests.
6. **Real Estate Website** – A website for a real estate agency that showcases houses, apartments, condominiums, and other properties for sale or rent.
7. **Event Management and Ticket Reservation Website** – A website for concerts, seminars, conferences, school events, or other activities that provides event information and simulated ticket reservations.

8. **Personal Portfolio and Freelance Services Website** – A website showcasing an individual's profile, skills, projects, services, and professional background.
9. **Online Learning or Tutorial Website** – A website offering tutorials, learning materials, online courses, and educational resources.
10. **Job Recruitment and Employment Website** – A website where employers can display job vacancies and applicants can submit simulated job applications.
11. **Automotive Sales and Services Website** – A website for a car or motorcycle dealership, repair shop, or automotive service center.
12. **Beauty and Wellness Website** – A website for a salon, spa, beauty clinic, or wellness center that showcases services, packages, and appointment requests.

Note: You may propose another website theme not included in the list, provided that it is related to a business, organization, institution, or service and is approved by the instructor.

III. Project Guidelines

1. Students should work individually, subject to the instructor's instructions.
2. Students must select one website theme from the suggested list or propose an alternative theme for instructor approval.
3. The website must contain at least five main interconnected content pages, excluding the Login, Sign Up, and Forgot Password pages.
4. The website must be developed using HTML, CSS, and JavaScript.
5. At least four JavaScript functionalities must be implemented.
6. The website must include functional forms with appropriate validation.
7. The website must be responsive and accessible on desktop and mobile screens.
8. All navigation links, buttons, and interactive elements must work properly.
9. Students must use appropriate images, colors, fonts, and layouts.
10. The project must be original. Copying an existing website without significant modifications is not allowed.
11. The Login, Sign Up, and Forgot Password interfaces must be included and visually consistent with the overall website design.

IV. Minimum Website Requirements

The website must include the following pages or interfaces:

A. Main Website Pages

1. **Home Page** – Homepage containing the website introduction, banner, navigation menu, and other relevant information.
2. **About Page** – Provides the background, history, mission, vision, or general information about the business, organization, or service.
3. **Products/Services Page** – Displays the products or services offered, including appropriate images, descriptions, and prices when applicable.
4. **Details/Information Page** – Provides additional information about selected products, services, or other relevant offerings.
5. **Contact/Registration Page** – Contains contact information and an interactive form for inquiries, registration, or other relevant transactions.

B. User Account Pages

6. **Login Page** – Allows users to enter their username/email and password. The system must validate the entered credentials and display appropriate success or error messages.
7. **Sign Up / Registration Page** – Allows new users to enter their basic information, including full name, username, email address, password, and confirm password. The form must validate required fields and check whether the password and confirm password match.
8. **Forgot Password Page** – Allows users to enter their registered email address and simulates the password recovery process by displaying an appropriate confirmation or error message.

V. Technical Requirements

The website must demonstrate the following technical concepts:

- Proper HTML5 structure
- External CSS stylesheet
- JavaScript implementation
- Working navigation menu
- Responsive layout

- Functional forms
- Form validation using HTML and JavaScript
- JavaScript event handling
- DOM manipulation
- Conditional statements
- At least one computation or interactive process
- Login credential validation
- Sign Up form validation, including password matching
- Forgot Password validation and simulated recovery process
- Consistent design across all pages, including user account interfaces

Required JavaScript Functionalities

Students must implement at least four JavaScript functionalities in their website. Examples include:

- Displaying welcome messages using the onload event
- Login credential validation
- Sign Up form validation
- Password and confirm password matching
- Show/Hide password functionality
- Forgot Password email validation
- Confirmation messages using confirm()
- Dynamic content display
- Search and filtering functionality
- Price or total cost calculation
- Shopping cart simulation
- Image gallery interaction
- Date and time display

The Login, Sign Up, and Forgot Password features are mandatory regardless of the selected website theme.

VI. Submission Requirements

Students must submit the following:

1. Complete website source code.
2. Organized project folder containing all HTML, CSS, JavaScript, and image files.
3. README file containing the project title, description, selected theme, and instructions on how to run the website.
4. Screenshots of the completed website.
5. Actual demonstration of the website during the final presentation.

VII. Project Evaluation

The project will be evaluated based on the following criteria:

- Website design and visual presentation
- Completeness of required pages and content
- Navigation and page connectivity
- HTML structure and implementation
- CSS styling and responsive design
- JavaScript functionality and interactivity
- Form validation and error handling
- Login, Sign Up, and Forgot Password implementation
- Creativity and originality
- Project presentation and demonstration

VIII. Important Reminder and Project Limitations

Since database development is not included in this subject, you are not required to implement database connectivity or backend processing.

The following limitations must be observed:

1. User registration information does not need to be permanently stored.

2. Login credentials may use predefined sample accounts or JavaScript variables for demonstration purposes.
3. The Forgot Password feature will only simulate the password recovery process. Actual email notifications or password reset links are not required.
4. Transactions such as orders, reservations, and registrations may be simulated using JavaScript.
5. No actual online payment processing or database-based account management is required.

Note: All user account features are intended for educational demonstration only. Credentials stored in JavaScript are visible to users and must not be used for real authentication or sensitive information.

All projects should be deployed online. Use only free webhosting sites. You can use Vercel or Netlify since they are free.
